BODY CONDITION SCORE RANGE OF ANIMALS: **FACILITY TYPE:** Beef FACILITY CONDITION: Average EVIDENCE/PHOTOGRAPHS TAKEN? Yes **DISPOSITION:** Initial Investigation Complete

## Remarks:

Tuesday January 15, 2019:

At approximately 12:37 PM I headed East on Little Willow Road towards the address in question. At approximately 12:45 PM I arrived at 5415 Little Willow Road, Payette, Idaho where L-L Livestock resides. At arrival, I met with Inspector Dan Chaney and facility owner Larry Dahnke and we discussed conducting a site evaluation in order to determine if facility was in compliance with IDAPA 02.04.15 Rules Governing Beef Cattle Animal Feeding Operations. I asked Mr. Dahnke if facility still used NMP approved in 2009 by Hilary Collinsworth for facility nutrient management. Mr. Dahnke stated he was still following his nutrient management plan and his facility had not changed since the time of approval in 2009. Mr. Dahnke informed Inspector Dan Chaney and I that we were free to conduct our site evaluation, but he had a meeting in Emmett and we could call him with any questions or concerns. At approximately 12:52 Inspector Dan Chaney and I started our site evaluation. We counted approximately 475 head of beef on site, observed two waste containment ponds in use on site, berming in place to prevent potential run on to upper pens, and berming in place to prevent potential run off from lower pens into the Patton Canal. After a thorough site evaluation, Inspector Dan Chaney and I left the facility at approximately 1:45 PM. The conclusion of our site evaluation made at 5415 Little Willow Road, Payette, Idaho 83661 found facility in compliance with IDAPA 02.04.15 Rules Governing Beef Cattle Animal Feeding Operations. A Site Evaluation Layout Map was created by Inspector Emily Montague to show areas of waste containment on site, berming in place to prevent potential run on and run off for facility, and natural flow of liquid byproduct (see attachment).
